

Everything connected. *Nothing on show.*

The recess behind your TV becomes the control panel for the wall and the whole house. It holds the router, streaming device, CCTV module and any other smart device, all hidden behind the screen.

Swing the TV out and the recess is right there.

Why hide it behind the TV?

- 1 Better connectivity**
Your router and streaming device sit at the heart of the room, right where the signal is needed.
- 2 No more clutter**
No more messy devices sitting in a corner of the living room.
- 3 All devices in one place**
One home for every box, from the broadband to the cameras.
- 4 Neat and tidy**
Built-in sockets, HDMI sockets, amplifiers for sound quality and CAT 7 sockets if required.

WHAT THE RECESS CAN HOLD

Router

Streaming device

CCTV module

Smart home hub

Amplifier

Built-in sockets

HDMI sockets

CAT 7 data

Swing the TV out. *It's all there.*

The TV on its swing-out arm, with sockets set into the recess behind it.

Cut-away: what the recess can hold, out of sight.

CONTROL FROM THE WALL

One panel for the house

A smart control panel and flush speakers are set into the same panels as the TV, so lighting, scenes, sound and cameras run from one place.

Smart control panel above a lit niche.

Flush speaker and control panel.

Black and gold marble smart wall with a soundbar recess and electric fire.

Tell us which devices you use, and we will plan the recess with you.
